

Applying dynamic taint propagation in order to enforce domain driven security

FREDRIK ADOLFSSON

Master in Computer Science

Date: January 23, 2018

Supervisor: Musard Balliu

Examiner: Mads Dam

Swedish title: Tillämpa dynamic taint propagation för att genomdriva domändriven säkerhet

School of Computer Science and Communication

Abstract

English abstract goes here.

Sammanfattning

Träutensilierna i ett tryckeri äro ingalunda en oviktig faktor, för trevnadens, ordningens och ekonomiens upprätthållande, och dock är det icke sällan som sorgliga erfarenheter göras på grund af det oförstånd med hvilket kaster, formbräden och regaler tillverkas och försäljas. Kaster som äro dåligt hopkomna och af otillräckligt.

A Example	10
------------------	-----------

Chapter 1

Introduction

We use the *biblatex* package to handle our references. We therefore use the command `parencite` to get a reference in parenthesis, like this [2]. It is also possible to include the author as part of the sentence using `textcite`, like talking about the work of Einstein [1].

1.1 Problem

1.2 Aim

1.3 Delimitations

Chapter 2

Background

2.1 Web Applications

2.2 Injection

2.2.1 Cross-site Scripting

2.2.2 SQL

2.3 Dynamic Taint Propagation

2.4 Domain Driven Design

2.5 Domain Driven Security

Chapter 3

Methodology

3.1 Injections

Chapter 4

Implementation

4.1 Plain (Bad name)

4.2 Dynamic Taint Propagation?

4.3 Domain Driven Security

Chapter 5

Result

Chapter 6

Discussion

Chapter 7

Future Work

Chapter 8

Conclusion
